

# CHAPTER THREE

BIODIVERSITY

## CHAPTER THREE

### BIODIVERSITY

3.1 The term ‘biodiversity’ encompasses the variety of life on Earth. It is defined as the variability among living organisms and the ecological complexes of which they are part, including diversity within and between species and ecosystems. Biodiversity manifests at species genetic and ecosystem levels. Biodiversity has direct consumptive value in food, agriculture, medicine, industry, etc. It also has aesthetic and recreational value.

3.2 India is one of the 12 mega-biodiversity countries of the world. From about 70% of the total geographical area surveyed so far, 46,000 plant species and 81,000 animal species representing about 7% of the world’s flora and 6.5% of the world’s fauna, respectively, have been described. Out of the total twelve biodiversity hot spots in the world, India has two; one is the north east region and other the western ghats.

3.3 Though more than one-fifth of India’s geographic area is recorded as forest area, it is not known with certainty how much forest area actually bears forest cover. The National Forest Policy (1952 and 1988) aim at having one third of country’s land area under forest and tree cover. As per the latest State of Forest Report 2009, the forest cover in the country is 690,889 kmsq. and constitutes 21.02 percent of its geographic area. There is a increase of 728 kmsq in forest cover in year 2007 as compared to revised assessment made in 2005. The total tree cover of the country has been estimated as 92,769 km sq. or about 2.82 percent of the country’s geographic area.

3.4 Plant biodiversity as a national and global resource is extremely valuable but is poorly understood, inadequately documented and often wasted. The

preservation of biodiversity is both a matter of investment and insurance to a) sustain and improve agricultural, forestry and fisheries production, b) act as a buffer against harmful environmental changes, c) provide raw materials for scientific and industrial innovations, and d) safe guard transferring biological richness to future generations.

3.5 Biodiversity the world over is in peril because the habitats are threatened due to such development programmes as creation of reservoirs, mining, forest clearing, laying of transport and communication networks, etc. It is estimated that in the world wide perspective, slightly over 1000 animal species and sub-species are threatened with an extinction rate of one per year, while 20,000 flowering plants are thought to be at risk.

#### Conservation Measures

##### Biospheres:

3.6 Areas rich in biodiversity and encompassing unique and representative ecosystems are identified and designated as Biosphere Reserves. The goal is to facilitate conservation of representative landscape and India’s immense biological diversity as described above. Till date, 15 Biosphere Reserves have been set up. The last one was set up in 29.01.2008 at Kachchh covering parts of Kachchh, Rajkot, Surendranagar and Patan civil districts of Gujarat State.

##### Project Tiger

3.7 As per the recommendations of a special task-force of the Indian Board of Wildlife, Project Tiger was launched in 1973 with the following objectives:-

- To ensure maintenance of available population of tiger in India for scientific, economic, aesthetic, cultural and ecological value.
- To preserve, for all times, the areas of such biological importance as a national heritage for the benefit, education and enjoyment of the people.

3.8 At present, there are 28 Tiger Reserves spreading over 14 states and covering an area of about 37,118 sq. kms. The population of tigers is estimated through tiger census conducted once in 4 to 6 years. The last such census was conducted in 2001-02.

### **National Parks and Wild life Sanctuaries**

The wild life Act provided for setting up National parks and sanctuaries for wild life. The basic idea in trying to encourage wild life is that human welfare is initially linked with it. The Government of India has pledged for all out efforts to conserve which not only seeks to protect and preserve what remains of wild fauna and flora but also seeks to augment this priceless national heritage.

3.9 Multipronged pressures on forests come from population, cattle grazing, fuel and fodder collection, industry and forest fires, etc. The remaining good forest cover is, therefore, estimated to be just 11% against the desirable 33% of the total land area as per the National Forest Policy. Up to the late seventies, forest land was a prime target for diversion for resettlement, agriculture and industrialization, and this trend was contained only by the Forest (Conservation) Act, 1980.

3.10 A two pronged strategy to increase forest cover essentially comprises

- Improving canopy cover in the forest land; and

- Undertaking afforestation in non-forest and degraded lands, preferably contiguous to forest blocks.

3.11 Realising the role of forests in controlling soil erosion, moderation of floods, recharging of ground aquifers, as habitat for wildlife, conservation of biodiversity and gene pool, etc., programmes were launched as early as the Second Five Year Plan for extensive Watershed Management followed later by establishment of a Protected Areas Network, under the Wildlife (Protection) Act, 1972, comprising of Biosphere Reserves, National Parks and Sanctuaries- both terrestrial and aquatic. This Network comprised of 14 Biosphere Reserves, 95 National Parks, 500 Wildlife Sanctuaries, along with such dedicated conservation programmes as Project Tiger, Crocodile Rehabilitation and Project Elephant. The Central Zoo Authority caters to the ex-situ conservation of wildlife through 275 zoos, deer parks, safari parks and aquaria, etc. India is also signatory to several International Conventions like CITES, International Whaling Convention (IWC); Convention on Migratory Species (CMS), World Heritage Convention (WHC), etc. India has recently taken the lead in the formation of the Global Tiger Forum.

### **Agro Biodiversity**

3.12 The National Bureau of Plant Genetic Resources (NBGR) established in 1976 as an institution under Indian Council of Agricultural Research (ICAR) emerged as an important organization dealing with various establishments of plant genetic resources. The organization is entrusted with the vital responsibility of germ plasm, exchange with appropriate quarantine measures, survey exploration, their organization, planning and coordination, comprising evaluation, documentation and conservation of diverse plant genetic resources. The National Gene Bank has also been established within the complex. Within

the new trade related intellectual property rights (TRIPS) within World Trade Organisation related agreements, documentation of our genetic resources is very important. The documentation of fish genetic resources is the responsibility of National Bureau of Fish Genetic Resources,

Lucknow also an institution under ICAR. The National Bureau of Animal Genetic Resources located at Karnal maintains the germ plasm of Indian Cattle and Buffalo breeds. This organization is also an institution of ICAR umbrella.

6	Mosses	7000	2000	28.6	608*	115	Not Known

Source : Botanical Survey of India, Kolkata.

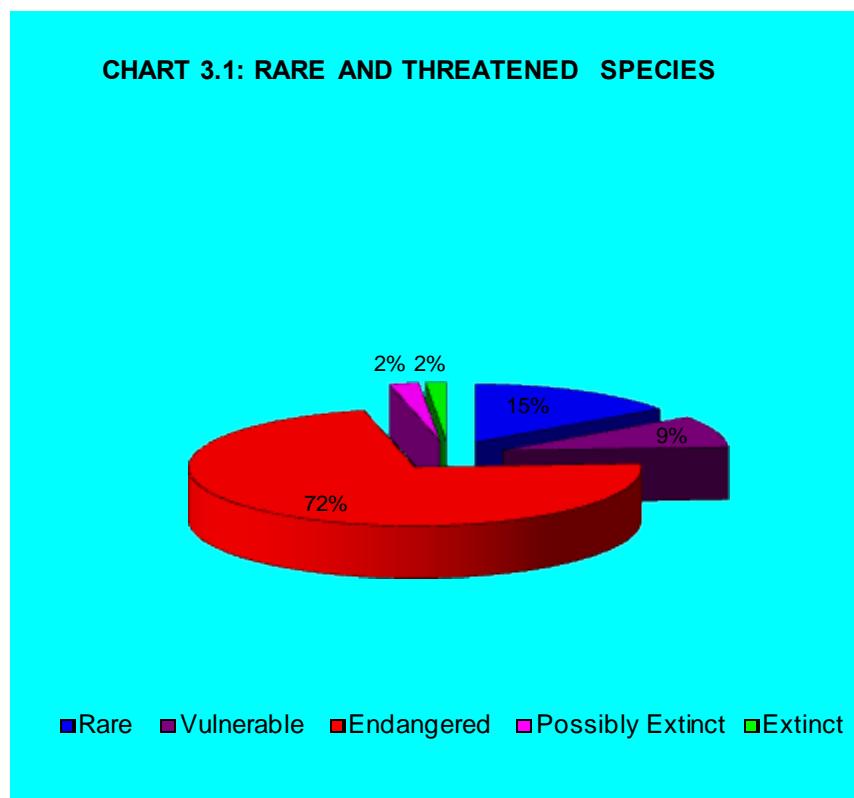

\* : Approximate

India has a rich heritage of species and genetic strains of flora. Overall about six percent of world species are found in India. It is estimated that India is tenth among the plant rich countries of the world and sixth among the centres of diversity and origin of agrodiversity. Out of the total twelve biodiversity hot-spots in the world, India has two, one is the north east region and other is western ghats (Khoshoo, T.N., 1995). The growing urbanization and industrialization causes the decrease of Natural habitats, which further results in the loss to biological diversity. Biodiversity, once lost cannot be recovered.

India has 76.96 million hectares of recorded forest area in March 2007. This accounts for 23.41% of total geographic area. Per Capita availability of forests in India is 0.06 ha which is much lower than the world average of 0.8 ha.

\* Revised

# : The change in the above table refers to change in the area with respect to revised assessment for 2005

A significant decrease in the forest covers is reported from Andhra Pradesh, Arunachal Pradesh, Assam, Chhattisgarh, Nagaland and Tripura whereas the states of Jharkhand, Manipur, Mizoram and Orissa have shown an increase in forest cover.

**TABLE 3.2.4(b) : CHANGES IN FOREST COVER OF THE NORTH-EASTERN REGION**

Source : State of Forest Report, 2009

Note: Column 6 to 10 indicates change in the forest cover with respect to previous assesment year  
(eg. Year X1 - X2 means Area in Year X2 - Area in Year X1)

The forest cover in the North-Eastern Region ( NER ) is about 66.81% of the Geographical Area.

There has been an increase in the forest cover in 2007 over the year 2005 by 598 sq. km.

Participation of people in the protection and management of forests has been emphasised in the National Forest Policy, 1988. Pursuant to this policy, Government of India through its resolution dated 1st June '90 formalised the JFM Programme. The JFM is being practiced through constitution of forest protection committees. About 84,632 committees are managing a total of 17.33 million ha of forest area under JFM .

\* **Mammal** - Brow - Antlered Deer, Yak, Hispid Hare  
**Aves** - Christmas Island Frigate Bird, Mrs. Hume's Bartaile Pheasant, Burmese Peafowl, Blacknecked Crane, Hooded Crane, Masked Finfoot, Jerdon's Courser, Forest Spotted Owlet.

\*\* **Mammal** - Cheetah.  
**Aves** - Pinkheaded Duck, Mountain Quail

A taxon is **Extinct**, when there is no reasonable doubt that the last individual has died.

A taxon is **Critical** when it is facing an extremely high probability of extinction in the wild in the immediate future.

A taxon is **Endangered** when it is not critical but is facing a very high probability of extinction in the wild in the near future.

A taxon is **Vulnerable** when it is not critical or endangered but is facing a high probability of extinction in the wild in the medium-term future.

A taxon is **Rare** when its populations are small and at present not endangered or vulnerable but are at risk .

A taxon is **Insufficiently Known** when an evaluation has been made but the available data are inadequate to assign a category.

**3.3.3 (b): RECENT ADDITION IN THE LIST OF THREATENED/ ENDANGERED SPECIES**

As per the Gazette Notification number 1-4/95 WL dated 5<sup>th</sup> November, 2001, published in Part II Section 3, subsection (II), Extraordinary Gazette of India, the Central Government ( Ministry of Environment and Forests) has made amendments in Schedule I and Schedule IV of the Subsection (1) of section 61 of the Wild Life (Protection ) Act, 1972 and included the following species in the Schedules of Threatened and endangered species

**1 Schedule 1**

- a) in Para II related to " Fishes" for serial number 2 and the entry relating thereto the following serial number and entries shall be substituted, namely
  - "2. Shark and Ray
  - (i) Anoxypristis cuspidate
  - (ii) Carcharhinus hemiodon
  - (iii) Glyptothorax gangeticus
  - (iv) Glyptothorax glyptothorax
  - (v) Himantura fuscata
  - (vi) Pristis microdon
  - (vii) Pristis zijsron
  - (viii) Rhynchobatus djiddensis
  - (ix) Urogymnus asperimus
- (b) for Part IVB, relating to Mollusca and the entries relating there to, the following Part IVB and the entries shall be substituted, namely:-

**"Part IV B-Mollusca**

- 1 Cassis cornuta (Linnalus)
- 2 Charonia tritonis (Linnalus)
- 3 Conus milne -edwardi Jousseaume
- 4 Cypraecassis rufa (Linnacus)
- 5 Hippopus hippopus
- 6 Nautilus pompilius (Linnaeus)
- 7 Tridacna maxima (Roeding)
- 8 Tridacna squamosa Lamarck
- 9 Terebralia spirillus (Linnaeus)

- 2 In Schedule IV to the said Act, after serial number 18 and the entries relating there to, the following serial numbers and entries shall be added, namely:-

**"19. Mollusca**

- i. Cypraea limacina' Lamarck
- ii. Cypraea mappa Linnaeus
- iii. Cypraea talpa Linnaeus
- iv. Fasciolaria trapezium = Pleuroloca trapezium (Linnaeus)
- v. Harpulina arausica
- vi. Lambis chiragra Chiragra (Linnaeus)
- vii. Lambis chiragra arithica
- viii. Lambis Crocata Croeata (Link)
- ix. Lambis millepeda (Linnaeus)
- x. Lambis scorpio (Linnaeus)
- xi. Lambis truncata (Humphrey)
- xii. Plaeuna placenta Linnaeus
- xiii. Strombus plicatus sibbaldi Sowerby
- xiv. Trochus niloticus Linnaeus
- xv. Turbo marmoratus Linnaeus

\* Population estimates are based on possible density of tiger occupied landscape in the area, not assessed by double sampling.

\*\* Data was not amenable to population estimation of tiger. However, available information about the landscape indicates low densities of tiger in the area ranging from 0.5 to 1.5 per 100 km<sup>2</sup>.

Source : Live Stock Census, Ministry of Agriculture

The livestock population in the country increased from 292 million in 1951 to the current estimate of 485 million. Grazing by Livestock puts pressure on grasslands and forests. Because of excessive grazing, natural regeneration is either absent or inadequate in 52.8% of the forests in the country.

An analysis of forests vis-a-vis livestock indicates continued free access to the forest area which has resulted in high rates of growth of livestock population causing land degradation and arresting the development of markets for forage crops. Overgrazing impedes regeneration, retards growth of vegetation, and leads to extinction of good palatable grasses which are replaced by less palatable and inferior grasses. Extensive areas have been invaded by bushes which are not browsed, excessive trampling makes the soil compact and impervious and prevents circulation of air, water, thus exposing the soil to erosion by wind and water.
